

## **Dr. D. Grant Selig**

Dr Selig Has successfully placed more than 15,000 implants during the past twenty years. He has performed 200 in-office and hospital based implant procedures annually. With applications ranging from edentulous ridges to partially edentulous sites, including multiple grafting procedures with sinus lifts and hip grafts.

During this time he has both lectured and trained implant clinicians world-wide, contributed, produced or been involved with the development of various products and significant surgical techniques, currently in use today for numerous implant manufacturers.

Dr. Selig was a clinical adviser for the development of a leading manufacture's dental implant and surgical kit. He provided a plethora of data on the immediate placement of dental implants into fresh extraction sites more than a decade ago. He was one of the first to pioneer the surgical technique of determining single-stage vs. two a stage procedures, by the implementation of a torque device. This modality is currently advocated by that company's surgical technique manual used by implant clinicians world-wide.

Dr. Selig is a Diplomat of The American Board of Oral Implantology, and a Fellow and Diplomat of the International Congress of Oral Implantology.

Dr Selig maintains his implant surgery practice in association with Red Rock Oral Surgery-Red Rock Dental Implant Center in Las Vegas, and provides implant placement services on a part-time basis in the New York City area.
